Build: Multi-Step Form with Validation

Problem: Build a 3-step registration form (personal info, address, review and submit) with field validation.

What This Tests: Multi-step state management, form validation, step navigation, controlled inputs.

jsx

JSX Copy

```jsx
function MultiStepForm() {
  const [step, setStep] = useState(1);
  const [formData, setFormData] = useState({
    name: '', email: '', password: '',
    street: '', city: '', zip: '',
  });
  const [errors, setErrors] = useState({});

  const handleChange = (e) => {
    const { name, value } = e.target;
    setFormData(prev => ({ ...prev, [name]: value }));
    if (errors[name]) setErrors(prev => ({ ...prev, [name]: '' }));
  };

  const validateStep = () => {
    const newErrors = {};
    if (step === 1) {
      if (!formData.name.trim()) newErrors.name = 'Name is required';
      if (!formData.email.includes('@')) newErrors.email = 'Valid email re
      if (formData.password.length < 6) newErrors.password = 'Min 6 charac
    }
    if (step === 2) {
```

```
  }
  setErrors(newErrors);
  return Object.keys(newErrors).length === 0;
};

const nextStep = () => { if (validateStep()) setStep(s => s + 1); };
const prevStep = () => setStep(s => s - 1);

const handleSubmit = () => {
  alert('Submitted: ' + JSON.stringify(formData, null, 2));
};

const Field = ({ name, label, type = 'text' }) => (
  <div>
    <label>{label}</label>
    <input name={name} type={type} value={formData[name]} onChange={hand
    {errors[name] && <span style={{ color: 'red' }}>{errors[name]}</span
  </div>
);

return (
  <div>
    <p>Step {step} of 3</p>

    {step === 1 && (
      <div>
        <h3>Personal Info</h3>
        <Field name="name" label="Full Name" />
        <Field name="email" label="Email" type="email" />
        <Field name="password" label="Password" type="password" />
      </div>
    )}

    {step === 2 && (
      <div>
        <h3>Address</h3>
        <Field name="street" label="Street" />
        <Field name="city" label="City" />
        <Field name="zip" label="ZIP Code" />
      </div>
    )}
```

```
          <h3>Review</h3>
          <p>Name: {formData.name}</p>
          <p>Email: {formData.email}</p>
          <p>Address: {formData.street}, {formData.city} {formData.zip}</p
        </div>
      )}

      <div>
        {step > 1 && <button onClick={prevStep}>Back</button>}
        {step < 3 ? (
          <button onClick={nextStep}>Next</button>
        ) : (
          <button onClick={handleSubmit}>Submit</button>
        )}
      </div>
    </div>
  );
}
```

Key Concepts: Step-based navigation, per-step validation, shared form state across steps, clearing errors on input change, review step, internal reusable Field component.

QUICK CHECK — no marks, just for you.

1. In this multi-step form, the user is on step 1 and clicks Next. Which fields does validateStep check before advancing?

- ◯ Only the fields the user has actually typed into so far
- ◯ None — validation only runs once on the review step before submit
- ◯ All six fields (name, email, password, street, city, zip), since they live in one formData object
- ◯ Only name, email and password — the step 1 fields

2. The user clicks Next on step 1 with an empty name and sees 'Name is required'. They then start typing into the name input. According to handleChange, what happens to that error message?

- ◯ It is cleared immediately as soon as that field changes, without re-running validation
- ◯ It is cleared only if the new value passes the name validation rule
- ◯ All errors for every field are cleared on any input change
- ◯ It stays visible until the user clicks Next again and validateStep re-runs

Check answer

3. What determines whether nextStep actually advances the form to the following step?

- ◯ Every field in formData is non-empty, regardless of which step is active
- ◯ validateStep returns true, which happens only when the newErrors object it built has no keys
- ◯ nextStep always advances; validateStep just paints the error messages in red
- ◯ The errors state object from the previous render is empty when nextStep is called
